WNY PRISM
Partnering to Protect Western New York from Invasive Species

We are now accepting applications for WNY PRISM’s Boot Brush Program!

We provide the materials, you install the sign and together, we prevent the establishment of invasive species.

Boot brush stations educate the public about invasive species and prevent their spread along one of the most common and prolific pathways of invasion: trails!

Invasive species spread prevention is the most cost-effective method of management. A boot brush station is a simple prevention tool that provides for long-term management.

If applications exceed our supply of boot brush stations, applications will be prioritized based on gaps in coverage and proximity to early detection species.

Partners are encouraged to apply regardless of their participation in this program in the past.

To apply, complete the application at: wnyprism.org/bootbrushapp by Sunday, March 1, 2020.

Boot brush stations must be installed by Friday, May 29, 2020.

Visit wnyprism.org/bootbrushprog for more information.

Current Boot Brush Station installations within the WNY PRISM region

Funding for WNY PRISM is provided by the Environmental Protection Fund through a contract with the NYS Department of Environmental Conservation. WNY PRISM is hosted by the Great Lakes Center and is a sponsored program of the Research Foundation for SUNY Buffalo State.
