

WNY PRISM

Partnering to Protect Western New York from Invasive Species

Our mission is to proactively identify, evaluate, and address invasive species priorities in western New York using a coordinated partnership of local professionals, organizations and private citizens to improve, restore, and protect local aquatic and terrestrial resources.

Invasive species are non-native species that have a significant negative impact on our environment, economy, and/or human health. Involved in all aspects of invasive species management, WNY PRISM provides leadership, coordination, assistance, and information for the western New York Region. We work with Partners to combine and leverage resources, to stop the spread of invasive species.

WNY PRISM Core Functions:

- Partner Coordination
- Information Management
- Education and Outreach
- Prevention
- Early Detection
- Assessment
- Rapid Response
- Management & Planning
- Habitat Restoration
- Volunteer Programing

Everyone is impacted by the presence and spread of invasive species, and together we are making a difference.

Help Stop the Invasion! Contact us to find out how you can partner with WNY PRISM and Help Protect Western New York from Invasive Species.

WNY PRISM OFFICE
Great Lakes Center - SAMC 319
SUNY Buffalo State
1300 Elmwood Avenue
Buffalo, NY 14222
