

# WNY PRISM

*Partnering to Protect Western New York from Invasive Species*

## Now accepting applications for WNY PRISM's Boot Brush Station Program!

We provide the materials, you install the sign, and together we prevent the establishment of invasive species.

Boot brush stations educate the public about invasive species and prevent their spread along one of the most common and prolific pathways of invasion- trails!

Invasive species spread prevention is a cost-effective management method and a boot brush station is a simple tool to help achieve long-term management success.

All partners are encouraged to apply! If applications exceed our supply of boot brush stations, applications will be prioritized based on coverage gaps and proximity to early detection species.

To apply, complete the application at <http://bit.ly/bbsapp2026> by **Monday, February 23, 2026.**

Boot brush stations must be installed by **Friday, June 5, 2026.**

For more info visit [wnyprism.org/programs/boot-brush-stations](http://wnyprism.org/programs/boot-brush-stations).
